CUSTOMER CASE STUDY

AdventHealth reduces compliance testing costs by 55%

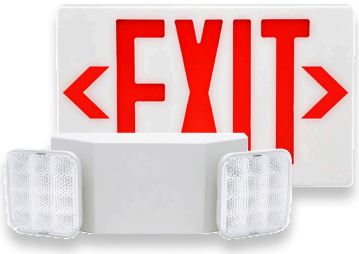

AdventHealth

OUTCOMES

1,790+
Annual hours saved

55%
Reduction in testing costs

0.9 FTEs
Reclaimed for critical work

CHALLENGE

AdventHealth is a nine-state healthcare network. With a dispersed footprint and limited staff, its Fish Memorial and DeLand facilities in Florida spent days manually testing 897 exit signs and e-lights across 13 buildings, a process that was vulnerable to gaps and errors, which had previously led to AHJ citations.

SOLUTION

AdventHealth deployed **897 Hexmodal Smart Emergency Lights and Exit Signs** across both facilities. No IT or Wi-Fi was needed, and devices automatically ran required NFPA 101 tests, replacing manual walkthroughs with one shared dashboard.

RESULTS

With Hexmodal, AdventHealth **cut annual testing costs by 55%** and saved over 1,790 labor hours a year, reclaiming 0.9 FTEs for higher-priority work. Real-time alerts now flag failures instantly, keeping every fixture survey-ready without a manual walkthrough.

"We went from days of manual testing to just pulling up Hexmodal's dashboard. It was that simple."
