CUSTOMER CASE STUDY

Atlantic Health saves 10,050 hours per year with smart emergency lighting

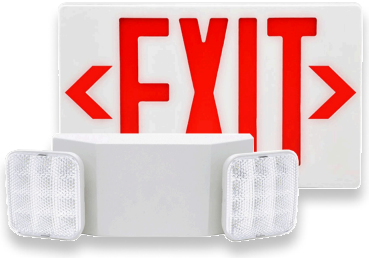

Atlantic Health

OUTCOMES

$382,235
Annual savings

90%
Less contractor time

10,050
Annual hours saved

CHALLENGE

Atlantic Health operates more than 400 facilities across New Jersey, including over 100 offsite MOBs and ASCs. Keeping every building survey-ready required contractors to manually test exit signs and e-lights while driving between locations. This approach cost 10,050 hours a year and grew harder to manage as new sites were added.

SOLUTION

Atlantic deployed Hexmodal Smart Emergency Lights and Exit Signs across its offsite portfolio. **No IT or Wi-Fi was needed**, and devices automatically ran required NFPA 101 tests. Real-time alerts flagged failures, and the dashboard generated survey-ready CMS documentation without manual walkthroughs.

RESULTS

With Hexmodal, **Atlantic Health cut contractor time by 90%** (where 37% was travel time) and eliminated 10,050 hours of manual testing annually. Automation delivered $382,235 in yearly savings, plus real-time visibility into every device and building.

"Hexmodal's LED emergency lights were extremely easy to set up. It was like magic!"
