84%
Compliance cost savings

4,290
Annual hours saved

CHALLENGE

Eden Medical Center is a 130-bed hospital in Castro Valley CA, where clinical departments rely on Engineering to manage CMS and state-level life safety compliance. They track 89 fridges and freezers plus 54 clean rooms across 230,000 sq ft. Manual checks left records inconsistent, putting the hospital at real Joint Commission risk.

SOLUTION

EMC deployed 143 Hexmodal monitors across fridges, freezers, and clean rooms, automatically running temperature, pressure, and humidity checks with one dashboard. **Installation took under a week. No hardwiring, no IT involvement**, with NIST-traceable certification included.

RESULTS

Using Hexmodal, EMC replaced manual walk-throughs with real-time alerts the moment a reading falls out of range, cutting compliance risk while **keeping CMS documentation survey-ready at all times**, all without utilizing contractors.

"If readings are out of range, we instantly know because the shop phone will ring. It's terrific to bring up the web browser daily, and when there's a problem, we can send someone straight to the room."

John Groen | Assistant Chief Engineer

Hexmodal

No hardware cost. Cancel anytime.

Unlimited users, 24/7 support, free spare parts, free recalibration.

Smart Cold Storage Sensors, Smart Room Pressure Sensors

Smart Fire Extinguisher Monitors

Smart Exit Signs & E-Lights

Smart Microinverters

Smart Leak Detectors
