

HEX-F ONE PAGER

# Never Miss a Fire Extinguisher Inspection Again

HEX-F automates the monthly fire extinguisher inspections every healthcare facility is required to perform. A compact sensor mounts to each extinguisher and continuously checks pressure, weight, location, tampering, and obstruction. The data feeds into a dashboard that automatically generates survey-ready inspection reports.

It installs with no wiring, no Wi-Fi, and no IT security review. HEX-F runs on an operating-expense model with no upfront hardware cost.

Covers all four NFPA 10 monthly checks

24/7 monitoring vs. one visual check a month

Auto-generated, survey-ready reports

\$0 upfront cost, with operating expense only

"I value innovation and embrace the opportunity to participate in advancements that alleviate manual tasks."

Kenny Brengel, KJB Facility Consulting

## Manual Inspections Leaves Blind Spots

Manual extinguisher inspections create blind spots, paperwork risk, and wasted maintenance time. Between monthly checks, an extinguisher can go missing, discharge, or become obstructed without anyone knowing.

Up to a 60-day gap between inspections can leave compromised extinguishers unnoticed.

Manual inspection rounds pull staff away from higher-priority PMs and repairs.

Missed inspections or missing records can result in NFPA 10 compliance deficiencies.

# What HEX-F Delivers for Facility Teams

## Manual Inspections

Before Hexmodal

Manual monthly visual inspection, unit by unit

24/7 monitoring + an automated monthly report

Paper tags that are easy to lose before a survey

Digital logs auto-generated and surveyor-ready

Up to a 60-day blind spot between checks

Real-time alerts the moment a unit fails or is moved

Hours diverted from PMs and repairs

Those hours returned to higher-value facility work

With HEX-F

## Automated Inspections

### How the HEX-F Works

**Optical Sensor** confirms extinguisher fullness for the monthly inspection report.

**Smart Hook** weighs the extinguisher, validates location, and detects tampering.

**Obstruction Sensor** continuously confirms the area in front of the extinguisher is clear.

Units connect to a **cellular gateway** that covers up to 250,000 sq. ft., supports 1,000+ devices, and sends readings, reports, alerts, and CMMS work orders to your dashboard.

No IT, no WiFi, and no security review needed.

### Proven Results in Healthcare

HEX-F was developed hands-on with a working healthcare facility, refined across six iterations and five rounds of real-world feedback before reaching the version running today.
